

DCE Spotair

The Compact Venting Filter

Compact and versatile

The DCE Spotair is a compact venting filter designed for easy installation at any point in a material conveying system. At each location any dust generated is captured and returned efficiently to the process stream, maintaining a slight negative pressure in the system. As a result, valuable product is reclaimed improving yields and productivity.

The DCE Spotair is suitable for direct mounting onto elevators, conveyors, hoppers and day bins in all low air volume venting applications. It can be used as an integral part of a larger dust control system to ensure compliance with all relevant health and safety legislation.

Typical industries served

- Agrofood
- Cement
- Flour milling
- Food processing
- Grain & cereal handling
- Pharmaceutical
- And many more...

Proven media

The DCE Spotair uses two of DCE's proven filter media to give high efficiency, continuous operation cleaning across a range of filter areas from 2m² to 10m².

- Unicell spun-bonded polyester elements
- Dalamatic fabric filter bags

Special features

The DCE Spotair comprises two separate case designs to suit vertical or horizontal mounting. The vertical unit has a sloped hopper style design to prevent product retention in the case. A range of options is available to cover application in hazardous environments.

Options

- Anti-static features**
- Anti-sparking fan**
- Motors and controllers suitable for hazardous areas**
- Alternative filter media**

The DCE Spotair

Robust DCE design

Compact dimensions

High efficiency continuous operation

Proven DCE filter media

Stainless or mild steel construction

Supplied fully assembled for easy installation

Total plant de-dusting capability

With the addition of the Spotair to the DCE range, DCE now offers a complete scope of dust control from the smallest to the largest air volumes.

Compact venting filters

Insertable filters

Centralised de-dusting filters and vacuum cleaning systems
